Lecturers: [Alistair Moffat](#) and [Artem Polyvyanyy](#)

Tutors: Alex, Alireza, Angus, Anh, Jack, Karl, Qizhou, Sayyaf, Sukriti, Thomas, Tobias, Tsz Kiu, Wenbin, Zoe.

Contact information is on the LMS page.

**Critical information #0:** The single most important thing you have to do to get the semester off to a good start is to **make sure you have friends in the class.**

Every time you enter a room over the next two weeks, sit down next to someone you don't know, and introduce yourself.

**Critical information #1:** Everything is on the LMS, including all handouts.

Lecture recordings will appear on the LMS page shortly after each class.

You should look at the LMS page every couple of days right through the semester.

**Critical information #2:** Workshops will commence **Week Two**. There are no workshops this week.

**Critical information #3:** The textbook will be used extensively, including in Workshops.

**Programming, Problem Solving, and Abstraction with C** by Alistair Moffat (second edition, Pearson, 2012), on sale at the Co-op Bookshop for approximately \$82. An e-edition is available from the publisher's website for \$55, with more info at <http://people.eng.unimelb.edu.au/ammoffat/ppsaa>.

You are advised to have your own copy, and there are many available in the second-hand market.

Having another C book available may also be helpful.

Checklist

**Critical information #4:** It is a very big class this year, and many of you have been able to register for in-person lectures. Nevertheless, we expect that all students who wish to attend the lectures in person will be able to fit in the rooms. No-one should feel excluded from the lectures.

Mon	4:15pm	Kathleen Fitzpatrick Theatre, Arts West
Thu	10:00am	Carillo Gantner Theatre, Sidney Myer
Fri	11:00am	Carillo Gantner Theatre, Sidney Myer

**Critical information #5:** All workshops in Alice Hoy 210 and Alice Hoy 222 are “bring your own device”. If you have registered for a class in one of these two rooms and are not able to bring your own computer to class each week you should switch to another class.

There will be technical support provided in the first classes in those two rooms to help you install the required software.

Foundations of Algorithms provides further programming, now using the language C, with an emphasis on fundamental techniques and algorithms, and on software development skills.

Particular topics that will be covered include dynamic data structures, and the algorithms that manipulate them (lists, trees, hash tables); searching algorithms including pattern searching; and sorting algorithms.

We go “under the hood”, and build technical understanding.

[Getting help](#)

[Assessment](#)

[Checklist](#)

You can use any C programming environment that you have access to. The MSE labs support two different mechanisms, one based on [jEdit](#) and command-line compilation, and one based on the [Eclipse](#) integrated development environment.

The former provides a “bare metal” understanding of programming.

Both approaches are free and can be installed on home computers and laptops.

The emphasis is on [you](#) doing programming, and learning the necessary skills in a [hands on](#) manner.

You need to work steadily through the semester, and write (and execute) programs throughout. You will also need to develop your knowledge of both programming techniques, and of the processes that lead to the development and analysis of algorithms.

Programming is like driving a car, you need lots of actual practice to become good at it.

[Workload](#)

[Getting help](#)

[Assessment](#)

[Checklist](#)

There are three lectures each week, plus a two-hour workshop.

Workshops will consist of approximately one hour of “tutorial”-style interaction, plus one hour of supervised programming work. Two tutors will be present during the second hour to provide help and support.

You should stay up to date with [all](#) scheduled classes. If you choose not to attend lectures, be sure to watch them online prior to your next workshop.

information](#)

[Overview](#)

[Workload](#)

[Getting help](#)

[Assessment](#)

[Checklist](#)

You may use any of MSE computer labs in Alice Hoy, Old Engineering, Bouverie Street, and Electrical Engineering when they are unbooked.

Your standard University account name and password will allow access. Login during your first few weeks to initialize your account, *even if you will be doing your programming on your own computer.*

Your University email address (something like [jsmith@student.unimelb.edu.au](mailto:jsmith@student.unimelb.edu.au)) should be directed to a location at which you will see any emails we send.

Three lectures, and a two-hour workshop.

Plus:

- ▶ One review hour for each hour of lectures, including reading the text
- ▶ Two preparation hours for the workshop.
- ▶ Two hours of general review/reading, perhaps in a study group.

In total, around 12 hours per week per subject is required, starting immediately.

Make a study timetable for all activities.

Then start following it.

[Getting help](#)

[Assessment](#)

[Checklist](#)

If you have outside interests (including work) that consume more than approximately 12–15 hours per week, you are seriously jeopardizing your chances of passing.

If your outside interests cannot be restricted to fewer than 12 hours per week, you should consider taking only three subjects per semester.

There are a range of mechanisms to use when you need help.

- ▶ Check the LMS for general announcements.
- ▶ Search the LMS discussion for the same question.
- ▶ Post your query to the LMS discussion forum. Read other posts and responses while you wait for a response to your query.
- ▶ Ask a question after a lecture (or at the start of a lecture if the answer will be of wide interest).
- ▶ Ask in your workshop.

information](#)

[Overview](#)

[Workload](#)

[Getting help](#)

[Assessment](#)

[Checklist](#)

Your final mark is the combination of three components.

Task	Due	Marks
Mid-semester test	2 Sep	10%
Assignment 1	23 Sep	15%
Assignment 2	21 Oct	15%
Examination		60%

To pass the subject as a whole you must also attain at least 28/70 (combined) in the test and exam, and 12/30 (combined) in the two projects.

information](#)

[Overview](#)

[Workload](#)

[Getting help](#)

[Assessment](#)

[Checklist](#)

The test will take place on **September 2** in the usual class time. You should use the test as early feedback of your status in this subject.

If you do well, that's great.

If you do poorly, heed the signal it sends.

A sample test, and more details of the format, will be supplied closer to the time.

All assessed work in this subject is [individual](#).

We routinely run sophisticated similarity checking software over all submissions. If you are clever enough to outsmart this software, you are also clever enough to do your own project.

The University's Academic Integrity policy will be applied if duplicate work is detected. Penalties go as far as subject failure, or even termination of enrolment.

You will be required to submit an “Authorship Declaration” with both assignments.

There are also rules governing misuse of the various computer systems.

Misuse includes unauthorized storage of copyright material (software as well as digital data like music); unauthorized access to other accounts; and any other activity not associated with your study.

Choose a sensible password, and keep it secure.

## Things to be done:

- ▶ Check that you can access the LMS page.
- ▶ Get hold of the textbook, [Programming, Problem Solving, and Abstraction with C](#). Start reading it.
- ▶ (By Friday) Confirm your workshop time, and check the LMS for any late messages about workshop locations.
- ▶ Most importantly, make some new friends, have some fun, get set for a great semester, and start believing that **Algorithms are Fun!**
